CodeQuery API

1.0.0 OAS 3.1

/openapi.json

AI-Powered Code Intelligence API – ingest GitHub repositories and ask natural-language questions about the code using RAG.

Repositories

POST	/api/v1/repositories	Add a new repository for analysis
GET	/api/v1/repositories	List all repositories
GET	/api/v1/repositories/{repo_id}	Get repository details
PUT	/api/v1/repositories/{repo_id}	Update or re-analyse a repository
DELETE	/api/v1/repositories/{repo_id}	Delete a repository and all associated data

Questions

POST	/api/v1/repositories/{repo_id}/questions	Ask a question about a repository
GET	/api/v1/repositories/{repo_id}/questions	List question history for a repository
GET	/api/v1/questions/{question_id}	Get a single question with full answer
DELETE	/api/v1/questions/{question_id}	Delete a question

Analysis

GET	/api/v1/repositories/{repo_id}/analysis	Get analysis job status for a repository
GET	/api/v1/repositories/{repo_id}/statistics	Get code statistics for a repository

GET `/api/v1/health` Service health check

Schemas

AnalysisStatusResponse Expand all `object`

CodeStatistics Expand all `object`

HTTPValidationError Expand all `object`

HealthResponse Expand all `object`

LanguageDetail Expand all `object`

QuestionCreate Expand all `object`

QuestionDeleteResponse Expand all `object`

QuestionListResponse Expand all `object`

QuestionResponse Expand all `object`

RepositoryCreate Expand all `object`

RepositoryCreateResponse Expand all `object`

RepositoryDeleteResponse Expand all `object`

RepositoryListResponse Expand all `object`

RepositoryResponse Expand all `object`

RepositoryStatisticsResponse > Expand all `object`

RepositoryUpdate > Expand all `object`

SourceReference > Expand all `object`

UsageStatistics > Expand all `object`

ValidationError > Expand all `object`
